Volume 158 1986

Contents

Letters to the Editor

$^{12}C^{18}O$ in OMC-1: kinematics, molecular column density and kinetic temperature distribution
Wilson, T.L., Serabyn, E., Henkel, C., Walmsley, C.M. L1

Variability of the gravitational mirage P.G. 1115+080
Vanderriest, C., Wlérick, G., Lelièvre, G., Schneider, J., Sol, H., Horville, D., Renard, L., Servan, B. L5

Molecular hydrogen emission in HH complexes. I. AS 353A/HH 32
Zealey, W.J., Williams, P.M., Taylor, K.N.R., Storey, J.W.V., Sandell, G. L9

Cosmology

Physical constraints on the bipartition model of the Universe
Désert, F.X., Schatzman, E. 135

Extragalactic astronomy

The origin of nitrogen and the chemical evolution of spiral galaxies
Díaz, A.I., Tosi, M. 60

The compared specific energies of galaxies and ICM in the Coma cluster
Gerbal, D., Mathez, G., Mazure, A., Salvador-Sole, E. 177

Episodic accretion onto massive black holes
Bottema, R., Sanders, R.H. 297

Galactic structure and dynamics

The rotation curve of the Galaxy
Rohlfs, K., Chini, R., Wink, J.E., Böhme, R. 181

Stellar clusters and associations

The X-ray source in M 15: A binary composed of a neutron star plus a post main-sequence star?
Aurière, M., Maucherat, A., Cordoni, J.-P., Fort, B., Picat, J.P. 158

Formation, structure and evolution of stars

Explosive nucleosynthesis in carbon deflagration models of Type I supernovae
Thielemann, F.-K., Nomoto, K., Yokoi, K. 17

Researches on novae and related objects. I. The spectral evolution of nova FH Ser (1970)
Rosino, L., Ciatti, F., Della Valle, M. 34

Evolution of massive stars: comparison of cluster sequences and models with mass loss
Mermilliod, J.-C., Maeder, A. 45

DN Tauri: a spotted T Tauri star
Bouvier, J., Bertout, C., Bouchet, P. 149

The mass spectrum of the white dwarfs in cataclysmic binaries
Ritter, H., Burkert, A. 161

(RN) The evolutionary state of the He-weak star HD 49333
Maitzen, H.M. 205

Further studies of a fragmentation problem
Monaghan, J.J., Lattanzio, J.C. 207

The eclipsing dwarf nova OY Carinae. IV. Photometry of advanced stages of a superoutburst
Schoembs, R. 233

A-type shell stars and infrared sources
Jaschek, M., Jaschek, C., Egret, D. 325

The 1983 eclipse of the high-latitude eclipsing system BL Tel
van Genderen, A.M. 361

Supermassive stars in galactic nuclei
Krügel, E., Tutukov, A. 367

(RN) A possible second period for HD 200925 ≡ V 1719 Cyg
Mantegazza, L., Poretti, E. 389

(RN) A theorem concerning nonradial oscillations
Gabriel, M. 395

(RN) More about active an inactive states of HZ Her = Her X-1
Hudec, R., Wenzel, W. 396

Stellar atmospheres

Ultraviolet and visual variability of θ CrB during a normal B-phase following a shell phase (1980–1985)
Doazan, V., Marlborough, J.M., Morossi, C., Peters, G.J., Rusconi, L., Sedmak, G., Stalio, R., Thomas, R.N., Willis, A. 1

A long-term study of SiO ($v=1$, $J=2$–1) maser emission from evolved stars and Orion A
Nyman, L.-Å., Olofsson, H. 67

The mid-ultraviolet spectrum of a^2CVn = HD 112413 = HR 4915
Hensberge, H., Van Santvoort, J., van der Hucht, K.A., Morgan, T.H. 113

(RN) The purity parameter of photometric systems
Jaschek, C., Frankel, S. 174

High resolution spectrum of the Li I 6708 region for a sample of CP 2 and reference stars
Faraggiana, R., Gerbaldi, M., Castelli, F., Floquet, M. 200

The stability of radiation-pressure-dominated accretion discs
Camenzind, M., Demole, F., Straumann, N. 212

(RN) The temperatures of Alpha Centauri A and B
Soderblom, D.R. 273

The formation of the continuum spectrum in X-ray pulsars
Kirk, J.G. 305

Brightness distribution of resonant line photons in spherical envelopes
Natta, A., Beckwith, S. 310

Comments on expansion parallaxes of supernovae
Hempe, K. 329

Periodicity of the radial-velocity and brightness variations of the hypergiant P Cygni (B 1 I a$^+$), and origin of the shell ejections
van Gent, R.H., Lamers, H.J.G.L.M. 335

Circumstellar shells around luminous emission-line stars in the Large Magellanic Cloud
Stahl, O., Wolf, B. 371

(RN) Circumstellar envelope around the binary system λ And
Glebocki, R., Sikorski, J., Bielicz, E., Krogulec, M. 392

Diffuse matter in space (including H II regions and planetary nebulae)

Compact ammonia cloud in the bipolar flow source CRL 2591
Takano, T., Stutzki, J., Fukui, Y., Winnewisser, G. 14

Study of IRAS observations of faint planetary nebulae
Iyengar, K.V.K. 89

Time-dependent chemistry in dense molecular clouds. II. Ultraviolet photoprocessing and infrared spectroscopy of grain mantles
d'Hendecourt, L.B., Allamandola, L.J., Grim, R.J.A., Greenberg, J.M. 119

A study of the dust distribution and extinction law in Mon R2
Natta, A., Beckwith, S., Evans II, N.J., Beck, S.C., Moorwood, A.F.M., Oliva, E. 143

Abundance gradients from type II planetary nebulae
Faúndez-Abans, M., Maciel, W.J. 228

The chemical composition of NGC 2363
Peimbert, M., Peña, M., Torres-Peimbert, S. 266

Excitation in the ionized diffuse interstellar medium
Sivan, J.-P., Stasińska, G., Lequeux, J. 279

The Sun

Solar Fe II line asymmetries and wavelength shifts
Dravins, D., Larsson, B., Nordlund, Å. 83

The frequency-time drift of pulsations
Aschwanden, M.J., Benz, A.O. 102

Coronal heating in closely-packed flux tubes: a Taylor-Heyvaerts relaxation theory
Browning, P.K., Sakurai, T., Priest, E.R. 217

Long-term width and asymmetry variation of some Fe I photospheric lines in solar quiet regions at the disk center
Cavallini, F., Ceppatelli, G., Righini, A. 275

Stability of cool flux tubes in the solar chromosphere. Linear analysis
Hasan, S.S., Kneer, F. 288

Energy transport in sunspot penumbrae
Schmidt, H.U., Spruit, H.C., Weiss, N.O. 351

The solar system

Photopolarimetry of Martian aerosols. II. Limb and terminator measurements
Santer, R., Deschamps, M., Ksanfomaliti, L.V., Dollfus, A. 247

Gravitational splitting of Quadrantid-like meteor streams in resonance with Jupiter
Froeschlé, C., Scholl, H. 259

The isotopes of CN in comets
Zucconi, J.M., Festou, M.C. 382

Physical and chemical processes

A numerical investigation of approximation procedures for optically thick resonance lines
Faurobert, M. 191

Instruments, data processing, and computational methods

Comparative performances of an objective grating concept in UV spectroscopic observations of solar system objects. II. D/H ratio observations in cometary atmospheres
Bruston, P. 97
